- **Deployment:** In order to deploy our app you would have to clone our repository and run it locally. Detailed instructions are also in the Read Me file, but if you clone the whole repository then go into the DynamicRhythm sub-directory in the DynamicRhythm main directory. Run node ‘app.js’ and then navigate to ‘localhost:8888’ and log in through Spotify and use our app. However, it will NOT work on Safari or Microsoft Edge, please use Chrome (not Chromium) or Firefox. Also, you must have a Spotify premium account. Furthermore, the app will try to connect to a database hosted locally which you will not have, but it should still run just fine.
